## MISSISSIPPI STATE DEPARTMENT OF HEALTH BUREAU OF PUBLIC WATER SUPPLY AM 10: 03 CCR CERTIFICATION

CALEN Sunny Hill Wa	NDAR YEAR 2015 ater Association, Inc.
Public V	Water Supply Name
List PWS ID #s for all Commi	0570014 unity Water Systems included in this CCR
The Federal Safe Drinking Water Act (SDWA) requires Consumer Confidence Report (CCR) to its customers easystem, this CCR must be mailed or delivered to the customers upon request. Make sure you follow the properail a copy of the CCR and Certification to MSDH.	s each Community public water system to develop and distribute a ach year. Depending on the population served by the public water mers, published in a newspaper of local circulation, or provided to the per procedures when distributing the CCR. You must mail, fax or Please check all boxes that apply.
Customers were informed of availability of CCI	R by: (Attach copy of publication, water bill or other)
IXOn water bills (attach copy of Email message (MUST Email message)	r (attach copy of advertisement) of bill) ail the message to the address below)
Date(s) customers were informed:5/ 25/	16, / / , /
1 1 1	or other direct delivery. Must specify other direct delivery
Date Mailed/Distributed: / /	
CCR was distributed by Email (MUST Email N	MSDH a copy)  Date Emailed: / /
CCR was published in local newspaper. (Attach	copy of published CCR or proof of publication)
Name of Newspaper: Enterprise-J	ournal
Date Published:5 / 29 / 16	
CCR was posted in public places. (Attach list of	flocations) Date Posted://
CCR was posted on a publicly accessible interne	et site at the following address ( <u>DIRECT URL REQUIRED</u> ):
public water system in the form and manner identi he SDWA. I further certify that the information in	e Report (CCR) has been distributed to the customers of this ified above and that I used distribution methods allowed by cluded in this CCR is true and correct and is consistent with ne public water system officials by the Mississippi State oly. $6-29-16$ Date
Deliver or send via U.S. Postal Service: Bureau of Public Water Supply P.O. Box 1700	May be faxed to: (601)576-7800
ackson MS 30215	May he emailed to:

CCR Due to MSDH & Customers by July 1, 2016!

## **Annual Drinking Water Quality Report** Sunnyhill Water Association, Inc. PWS #MS0570014 2015 Report May 29, 2016

We are pleased to present this year's Annual Water Qualify Report (Consumer Confidence Report) as required by the Safe Drinking Water Act (SDWA). This report is designed to provide details about where your water comes from, what it contains, and how it compares to standards set by regulatory agencies. This report is a snapshot of last year's water quality. We are committed to providing you with information because informed customers are our

Do I need to take special precautions?

Some people may be more vulnerable to contaminants in drinking water than the general population. Immunocompromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. EPA/Centers for Disease Control (CDC) guidelines on appropriate means to lessen the risk of infection by Cryptosporidium and other microbial contaminants are available from the Safe Water Drinking Holline (800-426-4791).

Where does my water come from?

Our water source is from 5 wells using water from the Miocene Aquifer.

Source water assessment and its availability

The source water assessment has been completed for our pubic water system to determine the overall susceptibility of its drinking water supply to identified potential sources of contamination. The general susceptibility rankings assigned to each well of this system are provided immediately below. A report containing detailed information on how the susceptibility determinations were made has been furnished to our public water system and is available for viewing upon request. The wells for Sunnyhill Water Association have received a moderate susceptibility ranking to contamination.

Why are there contaminants in my drinking water?

Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the Environmental Protection Agency's (EPA) Safe Drinking Water Hotline (800-426-4791). The sources of drinking water (both tap water and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs, and wells. As water travels over the surface of the land or through the ground, it dissolves naturally occurring minerals and, in some cases, radioactive material, and can pick up substances resulting from the presence of animals or from human activity: microbial contaminants, such as viruses and bacteria, that may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife; inorganic contaminants, such as salts and metals, which can be naturally occurring or result from urban stormwater runoff, industrial, or domestic wastewater discharges, oil and gas production, mining, or farming: pesticides and herbicides, which may come from a variety of sources such as agriculture, urban stormwater runoff, and residential uses; organic Chemical Contaminants, including synthetic and volatile organic chemicals. which are by-products of industrial processes and petroleum production, and can also come from gas stations, urban stormwater runoff, and septic systems; and radioactive contaminants, which can be naturally occurring or be the result of oil and gas production and mining activities. In order to ensure that tap water is safe to drink, EPA prescribes regulations that limit the amount of certain contaminants in water provided by public water systems. Food and Drug Administration (FDA) regulations establish limits for contaminants in bottled water which must provide the same protection for public health.

How can I get involved?

If you have questions about this report or concerning our water utility, please contact Charles Schilling, Water Manager, at 601-249-3502. We want our valued customers to be informed about their water utility. If you want to learn more, please attend our monthly board meeting, which is held at 6:00 PM on the third Monday of each month at the water office at 612 Delaware, Suite 4, McComb, MS.

**Description of Water Treatment Process** 

Your water is treated by disinfection. Disinfection involves the addition of chlorine or other disinfectant to kill dangerous bacteria and microorganisms that may be in the water. Disinfection is considered to be one of the major public health advances of the 20th century.

To comply with the "Regulation Governing Fluoridation of Community Water Supplies", MS0570014 is required to report certain results pertaining to fluoridation of our water system. The number of months in the previous calendar ear in which average fluoride sample results were within the optimal range of 0.7-1.3 ppm was 6. The percentage of fluoride samples collected in the previous calendar year that was within the optimal range of 0.7-1.3 ppm was 50%.

Additional information for Lead

If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. Sunny Hill water Association, Inc. is responsible for providing high quality drinking water, but cannotcontrol the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline or at http://www.epa.gov/safewater/lead.

## **Water Quality Data Table**

In order to ensure that tap water is safe to drink, EPA prescribes regulations which limit the amount of contaminants in water provided by public water systems. The table below lists all of the drinking water contaminants that we detected during the calendar year of this report. Although many more contaminants were tested, only those substances listed below were found in your water. All sources of drinking water contain some naturally occurring contaminants. At low levels, these substances are generally not harmful in our drinking water. Removing all contaminants would be extremely expensive, and in most cases, would not provide increased protection of public health. A few naturally occurring minerals may actually improve the taste of drinking water and have nutritional value at low levels. Unless otherwise noted, the data presented in this table is from testing done in the calendar year of the report. The EPA or the State requires us to monitor for certain contaminants less than once per year because the concentrations of these contaminants do not vary significantly from year to year, or the system is not considered vulnerable to this type of contamination. As such, some of our data, though representative, may be more than one year old. In this table you will find terms and abbreviations that might not be familiar to you. To help you better understand these terms, we have provided the definitions below the table

	Definition
Term	MCLG: Maximum Contaminant Level Goal: The level of a contaminant in drinking water below which there is no known or expected risk to health.
MCLG	MCLG: Maximum Contaminant Level Goal. The level MCLGs allow for a margin of safety.  MCLGs are set as close to the MCLGs as feasible.
	MCLGs allow for a margin of safety.  MCL: Maximum Contaminant Level: The highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible MCL: Maximum Contaminant Level: The highest level of a contaminant that is allowed in drinking water.
MCL	using the best available treatment technology.
MCL	t at the state contaminant in drinking water.
TT	TF: Treatment Technique: A required process intended to reduce the level of a contaminant in drinking water.
AL	TT: Treatment Technique: A required process intended to reduce the level of a contaminant and a contaminant which a water system must follow.  AL: Action Level: The concentration of a contaminant which, if exceeded, triggers treatment or other requirements which a water system must follow.
	Variances and Exemptions: State or EPA permission not to meet an MCL or a treatment technique under certain conditions.
Variances and Exemptions	Variances and Exemptions: State or EPA permission not to meet at 1100 and 1
LACITORGIA	Variances and Exemptions. State of the level goal. The level of a drinking water disinfectant below which there is no known or expected risk to health.  MRDLG: Maximum residual disinfection level goal. The level of a drinking water disinfectant below which there is no known or expected risk to health.
MRDLG	MRDLG: Maximum residual disinfection level goal. The velocity of the use of disinfectants to control microbial contaminants.  MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.
	April Maximum residual disinfectant level. The highest level of a disinfectant allowed in drinking water. There is defined a
MRDL	disinfectant is necessary for control of microbial contaminants.
MNR	MNR: Monitored Not Regulated
MPL	MPL: State Assigned Maximum Permissible Level
